

LJTap [Free PDF File] Creating Lifelike Figures in Polymer Clay

CONTINUE ►

With over 400 step-by-step photographs in full colour plus 200 detailed drawings, polymer-clay crafters everywhere can learn how to sculpt realistic 6x8 figures using the authors simple technique. The author, Katherine Dewey, a well-known polymer clay teacher and sculptor, shares a wealth of information in such detail that they're accessible even to beginning sculptors. She covers the essentials of working with polymer clay, the fundamentals of figurative modeling (including measuring to achieve the right proportions in any scale), and how to make the tools that will ensure success. She shows readers how to recreate faces and expressions, male and female torsos, legs, hands and feet, all using a simple applique technique, in which clay is built up rather than carved away. Then, of course, there are finishing touches like clothing and costumes, paint and fibre, and - for those seeking a touch of fancy - a simple method for creating incredibly realistic butterfly or fairy wings. Topics include: selecting clay, making modelling tools, proportioning figures, posing, ethnic and gender subtleties, facial expressions, costumes in clay, and finishing touches.
